Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The feature of using an optical dipole trap to manipulate (e.g., sort) a carbon nanotube within a plurality of carbon nanotubes, wherein a light source is tuned substantially to a resonant condition of a target class of said plurality of carbon nanotubes that have been synthesized render the invention novel and non-obvious over the prior art. Here, the prior art is limited to the use of optical tweezers to manipulate small objects and does not teach or suggest the application of an optical trap to carbon nanotubes. The only reference that suggests this application (Plewa et al.) does not have a proper date.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
